RESEARCH INTERESTS

My research focuses on building efficient and robust legged manipulation systems, including humanoids and quadruped manipulators. To this end, I develop whole-body controllers, reinforcement learning-based manipulation systems, and offline reinforcement learning algorithms. My recent work explores cross-embodiment learning to enable more efficient data collection for legged manipulators.

EDUCATION

Korea Advanced Institute of Science and Technology (KAIST) — Daejeon, South Korea
Ph.D. Student in Electrical Engineering — Sep. 2026 – Present
Advisors: Hyun Myung and Kimin Lee

Korea Advanced Institute of Science and Technology (KAIST) — Daejeon, South Korea
M.S. in Electrical Engineering — Sep. 2024 – Aug. 2026
Advisor: Hyun Myung

Sogang University — Seoul, South Korea
B.S. in Mechanical Engineering — Mar. 2018 – Aug. 2024
GPA: 4.02/4.50

* Equal contribution.

COMPETITIONS

Quadruped Robot Challenges, ICRA 2025 May 2025
Second Place Atlanta, USA
Organizer: IEEE Robotics and Automation Society
Mission: Enable autonomous quadruped locomotion over challenging terrain.
Contributions:

- Developed an RL-based whole-body controller.
- Integrated electrical components.

International Genetically Engineered Machine Competition (iGEM 2022) Nov. 2022
Gold Medal Paris, France
Organizer: iGEM Foundation
Nominations: Best Software, Best Hardware, and Best Presentation.
Mission: Autonomous biological experiment system using a robotic arm.
Contributions:

- Manipulation skill design (e.g., pipetting and incubator operation).

ROBOT PLATFORM EXPERIENCE

Humanoids	G1 (29 DoF and 23 DoF)
Quadrupeds	Go2, A2
Manipulators	ViperX, Nero
Quadruped Manipulators	Go2 + ViperX, A2 + Nero
